PROFESSIONAL SUMMARY

Java Developer experienced in the full SDLC, building and maintaining secure Java/Java EE applications using Spring Boot, Hibernate ORM, and REST APIs. Proficient in OAuth 2.0, JWT, JUnit/Mockito testing, MySQL optimization, and Swagger-based API documentation. Agile team player with strong debugging and problem-solving skills.

EDUCATION

Bachelor of Technology – Computer Science & Engineering

CGPA: 7.76

School of Management Sciences, Lucknow

TECHNICAL SKILLS

Languages & Backend: Java, Java EE, Spring Boot, Spring Framework, Hibernate ORM, JPA, REST APIs, SOAP Web Services

Security & Auth: OAuth 2.0, JWT Authentication, Role-Based Access Control (RBAC)

Testing & API Tools: JUnit, Unit Testing, Swagger/OpenAPI, Postman, Debugging

Databases: MySQL, Oracle SQL, Spring JDBC, Query Optimization, Schema Design

Core Concepts: OOP, Design Patterns, Dependency Injection, IoC, Data Structures, Algorithms, Exception Handling

Dev Practices & Tools: Agile, SDLC, Code Review, Maven, Git, GitHub, IntelliJ IDEA

TRAINING & EXPERIENCE

Java Developer Trainee | *Hulk Hire Tech*

Oct 2025 – Nov 2025

- Developed and maintained a payment integration workflow using Java, Spring Boot, and microservices, covering the full SDLC from design to deployment.
- Built and consumed REST APIs for transaction processing; implemented OAuth 2.0 Client Credentials flow for secure token-based authentication.
- Applied Hibernate ORM and Spring JDBC for structured data persistence; optimized MySQL performance through indexing and query tuning.
- Coordinated application releases with peer teams, adhering to release management best practices in an Agile environment.

Software Development Intern | *Netcamp Sol. Pvt. Ltd.*

Jul 2024 – Aug 2024

- Gained hands-on Core Java exposure, applying OOP design patterns and SDLC processes in Android application development.
- Supported team efforts in web development and basic backend integration, building foundational knowledge of client-server architecture.

PROJECTS

PayPal Payment Integration | *Java, Spring Boot, OAuth 2.0, MySQL, REST APIs, Swagger*

- Designed and developed a full-stack PayPal REST API integration module from concept to deployment, covering end-to-end order creation and payment capture workflows aligned with PayPal Order API specifications.
- Implemented OAuth 2.0 Client Credentials flow for secure backend communication, including access token acquisition, caching, and expiry-based refresh to ensure uninterrupted transaction processing.
- Engineered payment state transition logic with accurate status handling (CREATED → APPROVED → COMPLETED), ensuring reliable and auditable transaction tracking across all stages.
- Built modular provider services for Create Order and Capture Order APIs using Spring Boot dependency injection and IoC principles, making components independently testable and reusable.
- Implemented centralized exception handling with custom error codes and structured error responses, improving debugging efficiency and ensuring consistent error communication across all API endpoints.
- Used Spring JDBC and MySQL for structured data persistence with full transactional integrity; designed schema to support payment records, status history, and provider response logging.
- Documented all RESTful API endpoints using Swagger/OpenAPI, enabling seamless integration for peer application teams and reducing onboarding time for new developers.

OTP Authentication Module | *Java, Spring Boot, REST APIs, Swagger*

- Architected and developed a secure, enterprise-ready OTP-based authentication service using Java and Spring Boot, following SDLC best practices from design through testing.
- Implemented time-bound OTP generation and expiration logic with configurable validity windows, preventing replay attacks and ensuring session security for all authentication requests.
- Built RESTful APIs for OTP dispatch, verification, and invalidation using Spring MVC, with proper HTTP status codes and structured JSON responses for clean client integration.
- Applied centralized exception handling using Spring's `@ControllerAdvice` to manage invalid, expired, and already-used OTP scenarios with meaningful error codes and messages.
